

METHOD OF SELECTING AMONG MULTIPLY-CATEGORIZED ITEMS

ABSTRACT OF THE DISCLOSURE

A method for selecting content for play comprises allowing selection by a user of two
5 or more top-level categories from a list of categories where at least one of a plurality of
media content items are associated with two or more top-level categories. A list of only
those media content items associated with all of the two or more top-level categories selected
by the user are presented for selection and play.
